RESULT AND ANALYSIS REPORT OF THE FEEDBACK RECEIVED FROM THE STUDENTS FOR THE SESSION 2018-19

It has been observed that students take active participation in the satisfactory survey and given their inputs as per their wish. The total number of participant can be found fluctuating among and within the departments. It was come to our notice that the feedbacks are very positive when more number of students opt for taking up the survey for a particular teacher while the ratio of negative feedbacks are very low in the overall process. The number of student responses against a teacher is directly proportional to the supremacy of the teacher in the teaching learning and evaluation process as compared to his/her colleagues of the same department.

We are pleased to receive some of the constructive criticism from our students regarding the need of using more ICT in the classroom, teaching from updated editions of books, citing more relevant examples/references while delivering lectures, speed of delivering lecture and dictating notes, pronunciation of the teachers to name a few. Maximum students wanted good books and updated volumes of books in both their department library and central library. Few students were interested in digitalization of the classrooms so that more ICT facilities can be used while attending the classes.

The Principal, M.C College, Barpeta has been made aware of the inputs received from this satisfactory survey before preparing this final report and he has already sent emails to selected faculty members and either appreciate them or urged them to improve their teaching learning and evaluation process from this academic session onwards. The teachers with some negative feedbacks are encouraged to join few of the relevant faculty development programmes for making them better equipped with modernday tools and techniques for more effective classroom teaching.
